

# Summer season is...

# ...pool care season.

When caring for your pool this summer, empty water and filter materials into wastewater systems, not stormwater drains.

Do your part to keep pool water and chemicals **OUT** of storm drains .....

... direct all water to landscaped areas to soak into the ground or the sanitary sewer.

Pool and spa water need to be directed **AWAY** from storm drains. They contain chemicals that are harmful to waterways.

- Empty filter materials into proper trash disposal
- Storm drains lead directly to creeks, streams and rivers.....  
**UNTREATED!**
