Summer season is...

Source: diynetwork.com

...home care season.

When prepping and cleaning up from your home improvement project, sweep and clean properly... not in stormwater drains.

Do your part to keep debris and paints OUT of storm drains ...

... clean brushes in a sink and sweep up a debris to put into the trash.

NEVER clean brushes or rollers over a storm drain or pavement where it could wash to a drain. They contain chemicals that are harmful to waterways.

- Use tarps to collect paint chips when prepping for painting and place in trash container.
- Storm drains lead directly to creeks, streams and rivers.....
UNTREATED!
