PROJECT GUIDELINES

TRAFFIC MANAGEMENT NOTES:

1. Traffic calming measures may be required to address street level and cross-access conflicts.

CIRCULATION NARRATIVE

The circulation plan along the direct site and all adjacent parcels, proposed streets are shown in the plan to connect with the existing street system in an organized way. Net circulation plan accommodates and integrates the city's transportation. The capacity of the development will depend upon the development of adjacent properties.

- The proposed project is to be developed on existed streets and are oriented via a thoroughfare, a collector, and a local street. The proposed net circulation is shown in the plan. The access road, at the northeast corner, will be developed along with the road. The access road is shown in the plan.

- The proposed access will be developed as a thoroughfare, a collector, and a local street. The proposed access will be adequate for the development. The access road, at the northeast corner, will be developed along with the road. The access road is shown in the plan.

- The proposed access will be developed as a thoroughfare, a collector, and a local street. The proposed access will be adequate for the development. The access road, at the northeast corner, will be developed along with the road. The access road is shown in the plan.

- The proposed access will be developed as a thoroughfare, a collector, and a local street. The proposed access will be adequate for the development. The access road, at the northeast corner, will be developed along with the road. The access road is shown in the plan.
