Appendix D

WRIA 28 Restoration Opportunities
<table>
<thead>
<tr>
<th>Measure ID</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>WQ-1</td>
<td>Protect water quality.</td>
</tr>
<tr>
<td>WQ-2</td>
<td>Implement best management practices for use of pesticides and fertilizers.</td>
</tr>
<tr>
<td>WQ-3</td>
<td>Use construction best management practices to minimize runoff.</td>
</tr>
<tr>
<td>WQ-4</td>
<td>Restrict livestock access to streams.</td>
</tr>
<tr>
<td>WQ-5</td>
<td>Remove and/or replace failing septic systems.</td>
</tr>
<tr>
<td>WQ-6</td>
<td>Identify and reduce sources of contaminants in soils and water.</td>
</tr>
<tr>
<td>WQ-7</td>
<td>Maintain adequate summer flows to control high temperature.</td>
</tr>
<tr>
<td>WQ-8</td>
<td>Reduce excessive fine sediments.</td>
</tr>
<tr>
<td>WQ-9</td>
<td>Improve water quality (dissolved oxygen, bacteria, temperature).</td>
</tr>
<tr>
<td>WQ-10</td>
<td>Decommission or repair logging roads to prevent erosion.</td>
</tr>
<tr>
<td>WQ-11</td>
<td>Use timber harvest best management practices to reduce erosion.</td>
</tr>
<tr>
<td>WQ-12</td>
<td>Control agricultural runoff.</td>
</tr>
<tr>
<td>WQ-13</td>
<td>Educate shoreline property owners on best management practices to minimize impacts to water quality.</td>
</tr>
<tr>
<td>F-1</td>
<td>Protect remaining off-channel habitat.</td>
</tr>
<tr>
<td>F-2</td>
<td>Create additional side channel habitat.</td>
</tr>
<tr>
<td>F-3</td>
<td>Restore off-channel rearing habitat.</td>
</tr>
<tr>
<td>F-4</td>
<td>Remove barriers to fish passage.</td>
</tr>
<tr>
<td>F-5</td>
<td>Remove or repair failing culverts.</td>
</tr>
<tr>
<td>F-6</td>
<td>Supplement large woody debris.</td>
</tr>
<tr>
<td>F-7</td>
<td>Enhance spawning gravel.</td>
</tr>
<tr>
<td>F-8</td>
<td>Recreate stream meanders.</td>
</tr>
<tr>
<td>F-9</td>
<td>Improve stream channel shading.</td>
</tr>
<tr>
<td>H-1</td>
<td>Restore stream connectivity to off-channel and floodplain habitats.</td>
</tr>
<tr>
<td>H-2</td>
<td>Remove, lower, or set back dikes and levees.</td>
</tr>
<tr>
<td>H-3</td>
<td>Provide for adequate in-stream flows through management of water withdrawals.</td>
</tr>
<tr>
<td>H-4</td>
<td>Address water withdrawal polices for lakes.</td>
</tr>
<tr>
<td>H-5</td>
<td>Acquire diked properties.</td>
</tr>
<tr>
<td>H-6</td>
<td>Protect remaining floodplains.</td>
</tr>
<tr>
<td>H-7</td>
<td>Restore natural hydrology and movement of sediment.</td>
</tr>
<tr>
<td>R-1</td>
<td>Protect intact riparian areas.</td>
</tr>
<tr>
<td>R-2</td>
<td>Acquire riparian properties.</td>
</tr>
<tr>
<td>R-3</td>
<td>Enhance riparian vegetation.</td>
</tr>
<tr>
<td>R-4</td>
<td>Restore riparian forest.</td>
</tr>
<tr>
<td>R-5</td>
<td>Increase native conifer component of riparian vegetation.</td>
</tr>
<tr>
<td>R-6</td>
<td>Fence livestock away from riparian areas.</td>
</tr>
<tr>
<td>R-7</td>
<td>Restore riparian buffers impacted by agricultural practices.</td>
</tr>
<tr>
<td>R-8</td>
<td>Restore topsoil in riparian buffers impacted by fill, compaction, agricultural practices, or other uses.</td>
</tr>
<tr>
<td>R-9</td>
<td>Educate and provide incentives to landowners to restore riparian conditions.</td>
</tr>
<tr>
<td>Measure ID</td>
<td>Description</td>

<tr>
<td>------------</td>
<td>-------------</td>
</tr>
<tr>
<td>Stormwater</td>
<td></td>
</tr>
<tr>
<td>SW-1</td>
<td>Retrofit stormwater facilities to meet performance standards.</td>
</tr>
<tr>
<td>SW-2</td>
<td>Implement stormwater best management practices.</td>
</tr>
<tr>
<td>SW-3</td>
<td>Improve urban stormwater infrastructure to provide flow treatment.</td>
</tr>
<tr>
<td>SW-4</td>
<td>Use groundwater recharge and infiltration techniques as part of stormwater management strategy.</td>
</tr>
<tr>
<td>Non-native Species</td>
<td></td>
</tr>
<tr>
<td>NN-1</td>
<td>Take aggressive measures to prevent the introduction of non-native invasive plant and animal species.</td>
</tr>
<tr>
<td>NN-2</td>
<td>Control invasive riparian vegetation.</td>
</tr>
<tr>
<td>NN-3</td>
<td>Use weed management and education to control invasive plant species.</td>
</tr>
<tr>
<td>Wetlands</td>
<td></td>
</tr>
<tr>
<td>W-1</td>
<td>Protect wetland habitat.</td>
</tr>
<tr>
<td>W-2</td>
<td>Enhance and restore degraded wetland habitats.</td>
</tr>
</tbody>
</table>

**Timeline Definitions:**

**Short-term** (approximately 1-5 years) restoration projects include those that could be implemented by local landowners and volunteers and that would benefit the areas that are most in need. Short-term restoration efforts include habitat restoration and enhancement efforts in publicly owned areas. These projects could be implemented in the near term, depending on grant cycles and coordination with volunteer and community organizations.

**Long-term** (more than 5 years) restoration projects could be those that require coordination with other jurisdictions or that cover larger land areas. These projects may be more difficult to implement and would likely require additional planning and permitting.
### Impairments:
- Structures (e.g., levees, bridges) that limit historical floodplain connections and channel migration zones.
- Forested land converted to impervious surfaces for urban development and agriculture.
- Hydropower dams reduce stream flow variability, sediment delivery, and limit natural fish passage.
- Channel dredging and spoils disposal.
- River channel structures (e.g., jetties, bulkheads, breakwaters, and dikes).
- Disconnected wetlands and off-channel habitats.
- Introduction of non-native and invasive species.
- Degraded water quality.
- Fish passage barriers including tidegates and culverts that prevent access to off-channel habitats.
- Ecology-listed industrial facilities and contaminated sites.

### Programmatic Restoration Opportunities:
- F-1, F-2, H-1, WQ-2, WQ-6, WQ-7, WQ-9, H-2, H-5, W-1, R-1, R-3, SW-2, NN-1, NN-2 (see Table D-1)
- Protect rearing and spawning habitat for salmonids, sturgeon, Pacific lamprey, and eulachon.
- Enhance connections between side-channels, sloughs, lakes, and the mainstem.
- Protect existing bald eagle nesting and foraging habitat (i.e., large, old trees on shorelines and islands).
- Remove or modify abandoned pilings and overwater structures in restore in-stream habitats.
- Coordinate and support LCFRB and LCREP efforts to restore and protect habitats.
- Support efforts by NOAA Fisheries, LCFRB and other entities to implement the salmon recovery management actions.

### Information Sources and Organizations:
- Lower Columbia River Salmon Recovery & Fish and Wildlife Subbasin Plan (LCFRB, 2010).
- Lower Columbia Fish Recovery Board web page: [http://www.lcfrb.gen.wa.us/default1.htm](http://www.lcfrb.gen.wa.us/default1.htm).

</tbody>
</table>
Impairments:
- Development in the floodplain along tributary streams.
- Historical filling of Mulligan Slough.
- Increased sediment loading from urban runoff.
- Intense blue-green algae blooms occur due to excessive nutrients.
- Lack of shade and riparian forests along tributary streams.
- Poor agricultural practices contribute to water quality degradation.
- Decreased tidal flushing.
- Degraded water quality, including fecal coliform, low dissolved oxygen, PCBs and other contaminants.
- Lack of vegetation and structure for habitat.
- Invasive species in the watershed.
- Inadequate stormwater treatment and flow control.
- Failing septic systems.

Programmatic Restoration Opportunities:
- W-1, H-1, H-2, F-6, F-9, WQ-2, WQ-4, WQ-5, WQ-12, NN-2, SW-1, SW-2, SW-3, SW-4, R-5 (see Table D-1)
- Protect and restore floodplain wetlands in the Vancouver Lake lowlands.
- Control invasive fish species such as common carp through management and angler education.
- Increase habitat structure by reducing turbidity and allowing light penetration.
- Support public outreach and education efforts by Vancouver Lake Watershed Partnership.
- Support ongoing TMDL studies for Salmon Creek and Burnt Bridge Creek, upstream tributaries.

</tbody>
</table>
Impairments:
- Reduction in historical flooding and sediment transport from the Columbia River.
- Increasing cover by invasive weeds.
- Agricultural practices nearby limit native tree and shrub cover.
- Forested riparian buffer lacking on east shoreline.

Programmatic Restoration Opportunities:
- NN-2, R-3 (see Table D-1)
- Continue to implement the Ridgefield National Wildlife Refuge management plan that controls and replaces invasive plants and noxious weeds.
- Coordinate with Friends of Ridgefield National Wildlife Refuge to remove invasive vegetation and restore habitats within the refuge.
- Coordinate with U.S. Fish and Wildlife Service during implementation of the conservation plan for Ridgefield National Wildlife Refuge.

</table>
Impairments:
- Conversion of watershed to impervious surfaces.
- Streambank hardening, channelization, and scour.
- Fish passage barriers.
- Diking and roads disconnecting streams from floodplains.
- Fine sediment accumulation.
- Stormwater runoff resulting in head-cutting and erosion.
- Lack of grade controls such as large wood.
- Invasive species in the understory.
- Degraded water quality.
- Livestock access to stream channels.

Programmatic Restoration Opportunities:
- H-1, H-2, H-3, F-4, F-6, NN-2, R-3, R-6, R-8, WQ-8, SW-1 (see Table D-1)
- Prevent additional channel modifications (channel incising, head-cutting, etc.).

Information Sources and Organizations:
- Inter-Fluve, Inc. 2006. Technical assessment of the Whipple Creek Basin to support stormwater basin planning efforts in Clark County.
- Clark County Public Works, Clean Water Program.

<tbody>
<tr>
<td>All reaches</td>
<td>Restore forested riparian zones within shorelines.</td>
<td>High</td>
<td>Habitat</td>
<td>Short term</td>
</tr>
</tbody>
</table>
Impairments:
- Dikes, roads, railroads have disconnected floodplains from streams.
- Low habitat diversity, lack of riparian trees result in low supply of large woody debris.
- Stormwater runoff from urban areas impairs water quality in Vancouver Lake and Lake River system.
- Invasive species abundant in riparian zone.
- Lack of side channels negatively affects salmonid habitat.
- Agricultural uses and upstream residential uses contribute sediment and pollutants to Vancouver Lake and Lake River.
- Intense blue-green algae blooms occur during to excessive nutrients.

Programmatic Restoration Opportunities:
- F-2, F-3, R-4, R-6, NN-2, W-1, W-2, WQ-9, H-2, H-3 (see Table D-1)
- Create and/or restore side channel and off-channel habitat for chum spawning and coho overwintering.
- Restore riparian forest on the western shore.
- Support stewardship and volunteer opportunities for restoration through LCREP.
- Improve treatment of stormwater discharge to Vancouver Lake/Lake River system.
- Support ongoing TMDL studies for Salmon Creek and Burnt Bridge Creek, upstream tributaries.

Information Sources and Organizations:
- Clark County Water Resources & Clean Water Program: http://www.co.clark.wa.us/water-resources/.
<table>

</tr>
<tr>
<td>All reaches</td>
<td>Riparian forest restoration and restoration of hillslope processes (SNAP 2008)</td>
<td>High</td>
<td>Water Quality, LWD, Habitat</td>
<td>Long term</td>
</tr>
</tbody>
</table>
Impairments:
- Stream dredged, drained, and rerouted.
- Dikes and roads have disconnected stream from floodplain.
- Excessive peak flows and sediment transport from urban runoff.
- Degraded water quality – TMDL under development.
- Low stream shading levels and lack of riparian forested habitat. Greatest lack of shade and riparian canopy is near Andressen Road crossing and in lower Greenway (Ecology).
- Ditching and drainage of floodplain and wetlands.
- Livestock damage to riparian vegetation and stream.
- Fish passage barriers exist.
- Riparian vegetation devoured by non-native species, nutria.

Programmatic Restoration Opportunities:
- NN-2, R-3, R-4, R-8, W-1, W-2, H-1, H-2, H-3, H-6, WQ-5, WQ-8, WQ-9, F-4, F-6, F-8, F-9, SW-1, SW-2, SW-3, SW-4 (see Table D-1)
- Continue to trap and remove nutria.
- Public outreach and education related to residential lawn care and stormwater runoff.
- Preserve and protect associated wetlands which support stream baseflow and habitat.

### Site-Specific Restoration Opportunities

<table>
<thead>
<tr>
<th>Reach or Location</th>
<th>Site-Specific Restoration Opportunities</th>
<th>Relative Priority of Actions</th>
<th>Ecosystem Functions Addressed</th>
<th>Timeline</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reach 2</td>
<td>• Continue efforts to restore native habitat and reconnect stream to wetlands through the Burnt Bridge Creek Regional Wetland Bank &amp; Greenway Trails Project from I-205 to 112th Avenue, and from Oakbrook Way to NE 127th Avenue.</td>
<td>High</td>
<td>Habitat, Hydrology</td>
<td>Short term</td>
</tr>
</tbody>
</table>
Impairments:
- Floodplains reduced or eliminated along Lower Columbia River.
- Forests converted to residential lots and pastures.
- Increased impervious surfaces such as roads.
- Poor riparian habitat; lack of large woody debris.
- Degraded water quality – TMDL for fecal coliform.
- Invasive vegetation in riparian areas, particularly Japanese knotweed, reed canarygrass, and Himalayan blackberry.
- Fish passage barriers.

Programmatic Restoration Opportunities:
- H-1, H-7, SW-1, SW-2, SW-3, F-4, F-6, F-8, R-3, R-7, R-8, WQ-5, WQ-9, NN-2 (see Table D-1)
- Restore floodplains.

Information Sources and Organizations:
- Steigerwald Lake National Wildlife Refuge, web site: http://www.fws.gov/ridgefieldrefuges/steigerwaldlake/

<td>Long term</td>
</tr>
<tr>
<td>Various</td>
<td>Control invasive vegetation noted in 2007 SNAP report.</td>
<td>Medium</td>
<td>Habitat</td>
<td>Short term</td>
</tr>
</tbody>
</table>
Impairments:
- Floodplains reduced or eliminated by development and infrastructure.
- Poor quality riparian habitat and lack of tree cover.
- Gravel roads within shoreline areas.
- Invasive plants.
- Placement of dikes and levees to confine channel.

Programmatic Restoration Opportunities:
- H-2, H-3, F-6, F-8, WQ-9, NN-2, R-3, R-6, R-8 (see Table D-1)
- Focus restoration actions on lower Lawton Creek.
- Assess floodplain conditions on Lawton Creek affected by past gravel mining.
- Acquire property or conservation easements along the lower reaches to provide opportunities to remove dikes and restore natural stream meanders within the floodplain.

Information Sources and Organizations:

<table>
<thead>

</tr>
<tr>
<td>All</td>
<td>Work with private property owners to promote restoration of riparian zones.</td>
<td>High</td>
<td>Habitat, LWD</td>
<td>Long term</td>
</tr>
</tbody>
</table>
### Impairments:

- Urban and suburban development in the lower mainstem has altered hydrology; sediment delivery; and degraded habitat.
- Loss of floodplain connectivity.
- Forest practices increase runoff that scours stream channels.
- Agricultural runoff.
- Degraded water quality.
- Fish passage barriers.
- Lack of forested canopy cover to below state stream shading standards.
- Lack of large woody debris.
- Levees and roads confine channel migration.

### Programmatic Restoration Opportunities:

- F-2, F-3, F-4, F-6, F-7, H-1, H-3, H-7, R-3, R-4, R-6, R-8, SW-3, NN-2, WQ-5, WQ-10, W-1 (see Table D-1)
- Increase public awareness about erosion issues associated with ATV use in and near streams.
- Manage forest practices, agriculture, and development to minimize impacts to sediment supply, runoff, and water quality.

</tr>
</tbody>
</table>
Impairments:
- Hydrology and sediment delivery (middle/lower reaches) altered by urban/suburban development.
- Conversion of agricultural land to residential in middle reaches.
- Loss of floodplain connectivity.
- Surface water diversions and impoundments.
- Forest practices in upper watershed.
- Agricultural runoff.
- Degraded water quality – TMDL under development for dissolved oxygen, fecal coliform, pH, temperature.
- Loss of rearing habitat, channel simplification and lack of LWD.

Programmatic Restoration Opportunities:
- H-1, H-6, SW-3, WQ-2, WQ-7, WQ-12, R-4, R-8, F-6, W-2 (see Table D-1)

Impairments:
- Conversion of forests to residential uses and roads.
- Historical use of shoreline as a cemetery.
- Sedimentation from uphill developments and urban runoff.

Programmatic Restoration Opportunities:
- NN-2, R-3, R-8 (see Table D-1)
- Acquisition of properties by the City of Camas to preserve lake and shoreline habitats through the use of Washington Wildlife and Recreation Office funds.

Information Sources and Organizations:

<tbody>
<tr>
<td>All</td>
<td>Reestablish native plantings, particularly in areas on the eastern side of the lake impacted by recreational access.</td>
<td>Medium</td>
<td>Habitat</td>
<td>Short term</td>
</tr>
</tbody>
</table>
Impairments:

- Conversion from pervious to impervious surfaces results in increased stormwater runoff and habitat loss.
- Excessive aquatic plant growth contributes to high nutrient levels.
- Algal blooms.
- Degraded water quality, especially increased phosphorus and nutrients.
- Residential and road development has reduced riparian forested habitat.
- Dam impounds lake and prevents natural fish passage.

Programmatic Restoration Opportunities:

- NN-3, WQ-9, H-4, R-3, W-1, W-2, H-6 (see Table D-1)
- Control noxious Brazilian elodea growth.
- Prohibit or limit motorized watercraft.
- Support WSU Watershed Steward Program to continue restoration activities and public outreach.

**Impairments:**
- Converted forests to agricultural and rural residential uses.
- Conversion of pervious to impervious surfaces.
- Ditching, draining and loss of associated wetlands due to residential development and agricultural practices.
- Invasive species.
- Impaired water quality.
- Degraded habitat in wetlands.

**Programmatic Restoration Opportunities:**
- W-1, W-2, R-3, R-8, NN-2, WQ-5, WQ-12, SW-1, SW-2 (see Table D-1)
- Protect associated wetlands to protect stream baseflow and downstream habitats.
- Restore wetlands and riparian areas that have been impacted by grazing and agricultural activities.

**NORTH FORK LACAMAS CREEK**

Impairments:
- Degraded riparian habitat due to rural residential development and agricultural uses.
- Degraded water quality.
- Lack of riparian forest.

Programmatic Restoration Opportunities:
- WQ-7, WQ-10, WQ-13, R-4, F-5, W-1, W-2 (see Table D-1)
- Develop and enhance thermal refugia for rearing cutthroat trout.

Information Sources and Organizations:

</table>
Impairments:
- Forests converted to residential and agricultural uses in the lower reaches.
- Agricultural diversion in the lower reaches.
- Degraded riparian habitat in the lower reaches.
- Low flow conditions from water withdrawals.
- Diked and armored streambanks channelize flows and reduce floodplain habitat.
- Degraded water quality.

Programmatic Restoration Opportunities:
- H-1, WQ-3, NN-2, R-3, R-7, R-8, F-3, F-4, F-7, W-1, W-2 (see Table D-1)
- Continue to remove invasive knotweed.
- Protect salmonid habitat in headwater reaches.
- Protect existing forests for timber and reforest vacant farm land.

Information Sources and Organizations:

<tr>
<td>All</td>
<td>Protect and restore stream channels to protect downstream water quality.</td>
<td>High</td>
<td>Hydrology, Water Quality</td>
<td>Long term</td>
</tr>
</tbody>
</table>
Impairments:
- Conversion from pervious to impervious surfaces increases magnitude, duration and frequency of peak flows and reduces summer base flows.
- Streambank hardening, channelization, and incision.
- Limited Channel Migration Zones (CMZs).
- Shade levels below state targets in lower reaches.
- Inadequate stormwater treatment and flow control.
- Failing septic systems.
- Poor agricultural practices contribute to water quality degradation.
- Fish passage barriers.
- Disconnected floodplains due to diking, roads, and railroads.
- Impaired streambank stability.
- Lack of large woody debris.
- Low pool and riffle frequency.
- Lack of side channel habitat due to channelization, filling, and bank armoring.
- Sedimentation and compaction of spawning gravels.
- Degraded riparian conditions.

Impairments:
- Impaired water quality – TMDL for fecal coliform, turbidity,
• Stream channel avulsion into gravel pits.

</tbody>
</table>
Impairments:
- Conversion of forests to agricultural and residential uses.
- Increased magnitude, duration and frequency of peak flows and reduced summer base flows caused by increases in impervious surfaces.
- Undersized culverts.
- Non-native invasive vegetation in riparian areas (particularly reed canarygrass and Himalayan blackberry).
- Degraded water quality.
- Runoff from agricultural areas.
- Small private dams and associated ponds on tributaries.
- Incised channels.
- Creation of drainage channels.
-Disconnected floodplain.
- Streambank damage in upper reaches caused by livestock access and clearing.
- Lack of large woody debris.
- Poor pool quality.
- Lack of riparian habitat diversity.

Programmatic Restoration Opportunities:
- NN-2, W-1, H-1, WQ-8, WQ-9, WQ-12, F-4, F-6, R-6, R-8, R-9 (see Table D-1)
- Protect floodplain wetlands in upper reaches.
- Increase large woody debris availability in lower reaches.
- Protect headwaters for coho and steelhead spawning.
- Explore potential restoration opportunities with WSDOT as part of the future SR502 widening project.
